BEACON
A Light of Ideas for the AI Age
A New Weekly Series by Nguyen Anh Tuan

Nguyen Anh Tuan delivers remarks at the America at 250 Conference · Loeb House, Harvard University · May 1, 2026

Throughout history, humanity has advanced not only through great discoveries, but also through great ideas.

Ideas that inspired freedom. Ideas that strengthened democracy. Ideas that advanced science. Ideas that elevated human dignity. Ideas that illuminated new paths when the future was uncertain.

Today, as artificial intelligence rapidly reshapes our civilization, humanity once again stands at a historic turning point.

The Age of Artificial Intelligence will not be defined solely by faster computation, more powerful models, or increasingly capable autonomous systems. It will ultimately be defined by the ideas that guide how these technologies serve humanity.

That is why the Boston Global Forum is launching Beacon.

Beacon is a new weekly series of ideas by Nguyen Anh Tuan, Co-Founder, Co-Chair and CEO of the Boston Global Forum, and Founder and Chief Architect of AIWS.

Each Beacon will present one original idea intended to help guide humanity through the opportunities and challenges of the Age of Artificial Intelligence.

Some Beacons may begin with a major global event. Others may emerge from technological breakthroughs, meetings with world leaders, conversations with AI pioneers, or moments of quiet reflection.

Yet every Beacon shares the same purpose:

To transform events into enduring ideas.

Beacon is not intended to comment on the news. It is intended to help shape the future.

The series will explore subjects including democracy, trust, human dignity, AI governance, wisdom, education, culture, peace, international cooperation, and the evolving relationship between humanity and artificial intelligence.

Many of these ideas will contribute to the continuing development of AIWS, AIWS Trust Infrastructure, AIWS Trust Order, AIWS Lumina, and other initiatives dedicated to building a better future for humanity.

The name Beacon carries a special meaning. Throughout history, a beacon has served as a light that guides travelers, warns of danger, and offers hope in times of uncertainty.

Today, humanity needs a different kind of beacon — not a physical light, but a beacon of ideas.

***Ideas that help us see farther.
Think deeper.
Act wiser.***

Beacon is offered in that spirit.

The first article in the series — ***The Boston Declaration: Renewing America's Beacon for Humanity in the Age of Artificial Intelligence*** — will be published on July 4, 2026, commemorating the 250th anniversary of the United States. It explores how the enduring ideals of freedom, democracy, innovation, and human dignity can inspire a new beacon for humanity in the Age of Artificial Intelligence.

As artificial intelligence transforms the world, we believe the future will belong not only to those who build more powerful intelligence, but also to those who build greater wisdom.

Welcome to Beacon.

May each Beacon help illuminate the path toward a more trustworthy, wiser, and more humane Age of Artificial Intelligence.
